**Usage:** The mixture is made from high-quality pine bark, which has excellent air permeability. Before transplanting plants, the soil must be ventilated and additionally moistened. Avoid moisture retention in the pot - this promotes rotting of the plant's roots.

**Safety:** The soil does not contain hazardous substances, microorganisms and fungi that could harm plants, animals, or humans; there are no GMOs, hormones, pesticides, salmonella, brucella, or nematodes; the soil is not contaminated with plastic or foreign substances.

**Storage conditions and shelf life:** Store in a dry, ventilated place. Protect from direct sunlight. Best consumed within 12 months from the date of manufacture.
